

LAMERS – ACADEMY OF PROFESSIONAL DRIVERS

At Lamers Bus Lines, we have added a new chapter to our driver training program. We feel that giving the driver the chance to experience unexpected traffic events, blown tires, icy roads and other challenges, while behind the wheel in a controlled simulation provides invaluable experience. That is why Lamers Bus Lines is proud to present its state-of-the-art driving simulator and mobile classroom.

Lamers' drivers are able to master basic and advanced maneuvers through most types of traffic, intersections and railroad crossings. Instructors can even program the simulator to allow for day, dusk and night driving; changing weather conditions like icy roads, rain, fog, or snow and mechanical failures such as a flat tire. We have found that there is simply no safer and more efficient way to supplement our training program.

Added Values:

- ♦ **Accident reduction:** Simulation training reinforces positive decision-making through practice in a risk-free environment.
- ♦ **Fewer repairs:** Practice on realistic scenarios should reduce damage to our company's vehicles.
- ♦ **Increased consistency:** Programming allows driver practice in situations most likely to be encountered.
- ♦ **Lifelike driving circumstances:** Simulation can be targeted to problem areas, such as unexpected pedestrian or vehicle movement.
- ♦ **Situational advantage:** Simulator offers response training for situations that cannot be practically experienced in a vehicle.
- ♦ **State-of-the-art:** Software delivers sharp visuals and crisp images to enhance learning.
- ♦ **Go Green – Go Lamers:** Eliminates the need of excessive on-the-road training, which saves fuel, reduces our carbon footprint, and vehicle wear and tear.

Lamers' drivers are safer, more confident and better prepared behind the wheel.
